

State Data Security Framework Survey

- * The [NAIC Data Security Model Law](#) (“NAIC Model Law”) establishes a framework of generally accepted best practices in information security, as well as a legal framework for requiring insurers and producers to implement such programs.
- * Outlined below is a comprehensive overview of state laws and their composition relative to the NAIC Model Law. To date, eleven states—Alabama, Connecticut, Delaware, Indiana, Louisiana, Michigan, Mississippi, New Hampshire, Ohio, South Carolina, and Virginia—have enacted laws that align with the NAIC Model Law. Maryland and New York have enacted their own, distinct data security provisions.
- * Though many states vary in their implementation of the NAIC Model Law (and the specific contours and details of their provisions), most states have incorporated its general framework, including requirements governing:
 - The development/implementation of a written “Information Security Program” (ISP),
 - The contours of an investigation into a cybersecurity event,
 - Notification of the state insurance regulator following a determination that a cybersecurity event has occurred, and
 - Certain limited exceptions.
- * The below survey outlines the varying state approaches to enacting the NAIC Model Law via a comparison of existing statutory text, associated regulatory provisions, and interpretive administrative guidance with respect to these specific provisions. It does not include penalty structures, a complete analysis of the definitional provisions, or discussion of the state regulator’s authority.
- * We envision this survey to be an evergreen document. As updates are put forth—whether through legislative or administrative action—we will update the document and provide a brief overview of the relevant changes in this top box in *bold and italicized blue text*. We ask, therefore, that you continuously review the document for updates to any statutes, regulations, bulletins, or other guidance documents. That said, if you see laws enacted, regulations finalized, bulletins issued, or enforcement actions undertaken that are not reflected in this survey, please let us know.
- * *Please note, we have compiled more detailed analyses on specific questions raised by Council members on how states have implemented the NAIC Model Law. In particular, we have reviewed the application of the attestation requirements and certain exceptions. To the extent that such materials are of interest, they can be found at the close of this survey. See [Appendix 1: Application of NAIC Model Law Attestation Requirements and Exceptions](#).*

State	ISP Requirements	Investigation Requirements	Notification Requirements	Exceptions	Other
<p>NAIC Model Law</p>	<p>Requires implementation of a written ISP (as overseen by the board of directors), details its objectives, and dictates how the ISP should be developed.</p> <p>Requires licensees to undertake a risk assessment and then design their ISPs so as to mitigate the identified risks, including a determination as to whether certain security measures (e.g., placement of access controls, identification and management of data, restriction of access at physical locations, etc.) are appropriate given the risks identified.</p> <p>Further requires:</p> <ul style="list-style-type: none"> • Due diligence and oversight of third-party service providers (TPSP). • Implementation of program adjustments, as needed. • Establishment of an incident response plan that addresses—among other things—the internal processes for responding to/recovering from a cybersecurity event. • Submission of an annual certification of compliance to the state regulator by February 15. 	<p>If the licensee learns/determines that a cybersecurity event has occurred, requires the licensee (or an outside vendor) to conduct a prompt investigation to:</p> <ul style="list-style-type: none"> • Determine whether a cybersecurity event occurred. • Assess the nature and scope of the event. • Identify any nonpublic information that may have been involved. • Perform and oversee reasonable measures to restore security. 	<p>Once it is determined that a cybersecurity event has occurred, requires each licensee to notify the state regulator within 72 hours that either of the following criteria has been met:</p> <ul style="list-style-type: none"> • The state is the licensee’s home state <u>or</u> • The licensee reasonably believes that the nonpublic information involved affects over 250 resident-consumers <u>and</u> is either (1) a cybersecurity event impacting the licensee of which notice is required to be provided pursuant to state/federal law <u>or</u> (2) a cybersecurity event that has a reasonable likelihood of materially harming any consumer in the state or any material part of the licensee’s normal operations. <p>Dictates the information that must be provided to the Commissioner (e.g., the date of the cybersecurity event, a description of how the information was exposed/breached, how the event was discovered, etc.); requires notification to consumers comport with the state’s data breach notification law; addresses how notice should be handled if the cybersecurity event occurs in a system maintained by a TPSP, etc.</p>	<p>Sets forth three primary exceptions which, if applicable, exempt licensees from the requirement that they develop and implement an ISP. These exemptions apply to:</p> <ul style="list-style-type: none"> • Licensees with fewer than 10 employees. • Licensees subject to HIPAA that have established and currently maintain an ISP pursuant to such statutes, rules, regulations, guidelines, etc., provided the licensee submits a written statement certifying its compliance with the state regulator. • An employee, agent, representative, or designee of a licensee (i.e., such individuals need not develop their own ISPs to the extent that they are covered by the licensee’s ISP). 	<p style="text-align: center;">N/A</p>

State	ISP Requirements	Investigation Requirements	Notification Requirements	Exceptions	Other
<p>Alabama</p> <p>Ala. Code §§ 27-62-1 et seq.</p>	<p>Mirrors the NAIC Model Law, except does <u>not</u> require licensees to consider implementing security procedures for evaluating, assessing, or testing the security of externally developed applications utilized by the licensee.</p> <p>Sets a state-specific deadline, giving licensees until May 1, 2021 to comply with the requirements relating to a licensee’s due diligence and oversight of TPSPs.</p>	<p>MIRRORS NAIC MODEL LAW</p>	<p>Mirrors the NAIC Model Law, except:</p> <ul style="list-style-type: none"> Requires notification of the state regulator within 3 business days (rather than 72 hours) of a determination that a cybersecurity event has occurred. Establishes more specific criteria to trigger notification to the state regulator (i.e., requires notification if the licensee is licensed in Alabama <u>and</u> the breach has a “reasonable likelihood” of harming a resident or the licensee’s normal operations). Requires licensees to notify the Commissioner if a TPSP is breached, <u>unless</u> the TPSP provides the required notice to the Commissioner. 	<p>Expands exemptions in the NAIC Model Law to include those with:</p> <ul style="list-style-type: none"> Fewer than 25 employees (rather than 10). Less than \$5 million in gross annual revenue. Less than \$10 million in year-end total assets. ISPs in accordance with GLBA. 	<p>Unlike the NAIC Model Law, does <u>not</u> include in the definition of “nonpublic information” “business related information” the tampering of which would cause a material adverse impact to the licensee.</p>

APPENDIX 1: Application of NAIC Model Law Attestation Requirements and Exceptions

- * We have drafted the below survey in response to requests from Council members for supplemental information regarding qualification as a licensee; the application of the annual certification requirements (i.e., the extent they apply to entities beyond domestic insurers); and the obligations associated with eligibility for and compliance with the exception/exemption provisions (e.g., whether filings are required for all licensees).
- * While each state has adopted a slightly nuanced approach, and the below survey outlines the varying approaches in greater detail, there are some general themes worth noting at the outset in response to the questions posed by Council members:
 - ***Qualification as a Licensee***. Every state appears to have adopted the NAIC Model Law’s definition of a ***licensee*** (i.e., a person who is licensed, authorized to operate, registered or required to be licensed, authorized, or registered under the state insurance laws, excluding a purchasing group or a risk retention group chartered and licensed in another state and/or a licensee that is acting as an assuming insurer that is domiciled in another state or jurisdiction). Though the definition of ***person*** varies from state-to-state, in every state it includes both an individual and an entity.
 - ***Certification Requirements***. Every state requires only ***domestic insurers/insurers domiciled in the state*** to annually certify/attest that they are compliant with the ISP requirements. Few states define who qualifies as an insurer in their state’s Insurance Data Security Law; as such—to the extent possible—we have included the definition of ***insurer*** used throughout the state’s insurance code.
 - ***Eligibility for Exceptions***. In general, the majority of states do not specifically address—in available guidance or otherwise—whether ***all licensees*** (even those that do qualify as insurers/do not need to submit the annual certification) are required to submit a filing that they are eligible for an exception. In such states, it is likely that—to the extent a filing is required to qualify for a given exception—such a filing is required of ***all licensees***. It warrants noting, however, that most states only require an affirmative filing that a licensee qualifies for an exception if the licensee is seeking to take advantage of an exception related to compliance with ***another regulatory regime*** (e.g., HIPAA, GLBA, New York’s cybersecurity regulation, etc.). If a state has issued supplemental guidance providing a different interpretation (e.g., Mississippi, New Hampshire, Ohio, and South Carolina), it is noted in the below survey.
 - ***Application of the Licensee-Designee Exception and Associated Certification Requirements***. One question specifically asked if there are circumstances under which a ***licensee that is not an insurer*** would need to file an annual certification (i.e., if an individual licensee submits qualification for an exception pointing to a business licensee’s ISP, and the business licensee otherwise qualifies for an exception, would the business licensee now need to file an attestation since the individual is operating under the business licensee’s ISP?). It does not appear as though any state specifically addresses this question in available guidance, but it seems unlikely that any state would affirmatively require non-insurers to file an annual certification (unless such a certification was otherwise required by an exception that is applicable to all licensees).
- * Given the limited guidance available, it warrants highlighting that the vast majority of states enacted their respective Insurance Data Security Laws in 2019 and 2020. As such, available guidance is fairly limited and—in many states—the state regulator is expected/has the authority to promulgate regulations in the coming months and/or years to implement and clarify these provisions.

States	Application	Annual Certification	Exceptions	Exception/Attestation Interaction
Questions	Who qualifies as a <i>licensee</i> ?	Who is required to submit an annual attestation/certification of compliance? Who qualifies as an <i>insurer</i> ?	Are licensees required to submit a filing, written statement, certification, etc. to take advantage of any of the exceptions? If an individual/entity is not required to file an annual certification, will they still be required to submit a filing describing their eligibility for an exception?	If an individual licensee submits qualification for an exception pointing to a business licensee’s ISP, and the business licensee otherwise qualifies for an exception, would the business licensee now need to file a certification since the individual is operating under the business licensee’s ISP?
Alabama Effective – May 1, 2019	Applies to <i>licensees</i> , defined to include a person (i.e., an individual or a nongovernmental entity) authorized to operate; registered; <u>or</u> required to be licensed, authorized, or registered under the state insurance laws (including insurance producers and insurance companies that do not meet the size and/or revenue-related exemptions or other exemptions). Bulletin 2019-05 . Does <u>not</u> include: <ul style="list-style-type: none"> • A purchasing group or a risk retention group chartered and licensed in another state. 	<i>By February 15, 2021, and unless an exception applies,</i> requires <i>insurers</i> domiciled in Alabama to submit an annual written statement by February 15 certifying that they are in compliance with the statutory requirements. Ala. Code § 27-62-4(i). While Alabama’s Insurance Data Security Law does <u>not</u> define <i>insurer</i> , the state’s Insurance Code defines the term to include “every person engaged as indemnitor, surety, or contractor in the business of entering into contracts of insurance.” Ala. Code § 27-1-2(2).	<i>Does not address whether a licensee that is not required to attest will still need to file an exception (if applicable).</i> Given its application to licensees, to the extent a filing is required for an exception, appears that such a filing must be filed regardless of whether a certification also had to be filed. Does <u>not</u> appear to require: <ul style="list-style-type: none"> • <i>Licensees</i> that qualify for the size and/or revenue-related exemptions; or • <i>Employees, agents, representatives, or designees of a licensee that are also licensees</i> that are covered by the ISP of the other licensee to submit a certification, attestation, or written statement to take advantage of the exception. Ala. Code § 27-62-9(a)(1), (3). Deems <i>licensees</i> to have met the requirements of the state’s Insurance Data Security Law if they have established and maintain an ISP in compliance with:	<i>Does not explicitly address this question in existing guidance,</i> but appears unlikely that an entity that does <u>not</u> otherwise qualify as an insurer would need to comply with the annual certification requirements (i.e., the statute provides that if an exception applies, the licensee will be exempt from—among other things—the certification provisions).

States	Application	Annual Certification	Exceptions	Exception/Attestation Interaction
	<ul style="list-style-type: none"> A licensee that is acting as an assuming insurer that is domiciled in another state or jurisdiction. Ala. Code § 27-62-3(9), (12). 		<ul style="list-style-type: none"> HIPAA, provided that the licensee submits a written statement certifying compliance. Ala. Code § 27-62-9(a)(2).
